

the art and science of smart patch testing™

PF158: Anisyl alcohol

CAS#: 105-13-5

Patient Information

Your patch test results indicate that you have a contact allergy to anisyl alcohol. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is anisyl alcohol found?

Anisyl alcohol is used to give volume and fragrance to products by adding a floral aroma.

How can you avoid contact with anisyl alcohol?

Avoid products that list any of the following names in the ingredients:

- 4-06-00-05909 (Beilstein Handbook Reference)
- 4-Methoxybenzenemethanol
- 4-Methoxybenzyl alcohol
