

the art and science of smart patch testing™

CS505: Triamcinolone acetonide

Patient Information

Your patch test result indicates that you have a contact allergy to triamcinolone acetonide. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is triamcinolone acetonide found?

Triamcinolone acetonide is a topical corticosteroid used in ointments, emollient creams, and lotions.

How can you avoid contact with triamcinolone acetonide?

Avoid products that list the following in the ingredients:

- triamcinolone acetonide

What are some products that may contain triamcinolone acetonide?

Treatments for Eczema/Psoriasis

*For additional information about products that might contain **triamcinolone acetonide**, go to the Household Product Database online (<http://householdproducts.nlm.nih.gov>) at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
