CS503: Prednisolone

CAS#: 5-24-8

Patient Information

Your patch test result indicates that you have a contact allergy to prednisolone. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is prednisolone found?

Prednisolone is found in medications used to treat inflammatory conditions such as arthritis, colitis, asthma, bronchitis, skin rashes, and allergic conditions of the eyes and nose.

How can you avoid contact with prednisolone?

Avoid products that list any of the following names in the ingredients:

- (11beta)-11,17,21-Trihydroxypregna-1,4-diene-3,20-dione
