SS500: 2-ethylhexyl-4-dimethylaminobenzoate

Patient Information

Your patch test result indicates that you have a contact allergy to 2-ethylhexyl-4-dimethylaminobenzoate. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is 2-ethylhexyl-4-dimethylaminobenzoate found?

This substance is an ingredient in some sunscreens.

How can you avoid contact with 2-ethylhexyl-4-dimethylaminobenzoate?

Avoid products that list any of the following names in the ingredients:

- | | |
|--|--------------------|
| ■ 2-Ethylhexyl p-(dimethylamino)benzoate | ■ EINECS 244-289-3 |
| ■ 2-Ethylhexyl p-dimethylaminobenzoate | ■ Escalol 507 |
| ■ Arlatone UVB | ■ Eusolex 6007 |
| | ■ HSDB 7169 |
| | ■ Padimate O |

What are some products that may contain 2-ethylhexyl-4-dimethylaminobenzoate?

Sunscreen

*For additional information about products that might contain **2-ethylhexyl-4-dimethylaminobenzoate**, go to the Household Product Database online (<http://householdproducts.nlm.nih.gov>) at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
