MC251: Potassiumchromate-(III)-sulphate

CAS#: 10141-00-1

Patient Information

Your patch test results indicate that you have a contact allergy to potassiumchromate-(III)-sulphate. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is potassiumchromate-(III)-sulphate found?

This substance is a violet-red crystalline compound used in tanning and in photography.

How can you avoid contact with potassiumchromate-(III)-sulphate?

Avoid products that list any of the following names in the ingredients:

- | | |
|---|---|
| ■ 0% Basicity chrome alum | ■ Crystal Chrome Alum |
| ■ CCRIS 7532 | ■ EINECS 233-401-6 |
| ■ Chrome alum | ■ Potassium chromic sulfate |
| ■ Chrome potash alum | ■ Potassium chromic sulphate |
| ■ Chromic potassium sulfate | ■ Potassium chromium alum |
| ■ Chromic potassium sulphate | ■ Potassium chromium disulfate |
| ■ Chromium potassium sulfate | ■ (KCr(SO ₄) ₂) |
| ■ (CrK(SO ₄) ₂) | ■ Potassium chromium(III) sulfate |
| ■ Chromium potassium sulphate | ■ Potassium disulphatochromate (III) |

What are some products that may contain potassiumchromate-III-sulphate?

Photography Products

Tanning Products

*For additional information about products that might contain **potassiumchromate-(III)-sulphate**, go to the Household Product Database online (<http://householdproducts.nlm.nih.gov>) at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
