

the art and science of smart patch testing™

MS996: Ketoprofen

Patient Information

Your patch test result indicates that you have a contact allergy to ketoprofen. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching and fluid-filled blisters.

Where is ketoprofen found?

Ketoprofen is a nonsteroidal anti-inflammatory drug (NSAID) with analgesic and antipyretic effects. It is available in medicines for systemic and topical application.

How can you avoid contact with ketoprofen?

Avoid products that list the following in the ingredients:

- Ketoprofen
- (RS)-2-3(benzylphenyl)propanoic acid
- 3-Benzoylhydratropic acid

What are some products that may contain ketoprofen?

Medicines for systemic and topical application

*For additional information about products that might contain **ketoprofen**, go to the Household Product Database online (<http://householdproducts.nlm.nih.gov>) at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
