DM226: Palladium chloride

CAS#: 7647-10-1

Patient Information

Your patch test results indicate that you have a contact allergy to palladium chloride. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching and fluid-filled blisters.

Where is palladium chloride found?

This is found in stainless steel, dental restorations, orthodontic appliances and carbon monoxide detectors. Simultaneous reactions to nickel occur in most palladium chloride patients.

How can you avoid contact with palladium chloride?

Avoid products that list any of the following names in the ingredients:

- | | |
|-------------------------|---|
| ■ CCRIS 6263 | ■ Palladium chloride |
| ■ Dichloropalladium | ■ Palladium chloride (PdCl ₂) |
| ■ EINECS 231-596-2 | ■ Palladium dichloride |
| ■ Enplate activator 440 | ■ Palladium(2+) chloride |
| ■ HSDB 4362 | ■ Palladium(II) chloride |
| ■ NCI-C60184 | ■ Palladous chloride |
| ■ NSC 146183 | |

What are some products that may contain palladium chloride?

Carbon Monoxide Detectors

Dental Products

For additional information about products that might contain **palladium chloride**, go to the Household Product Database online (<http://householdproducts.nlm.nih.gov>) at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
