

Erythromycin

CAS#: 114-07-8

Where is this allergen found?

Erythromycin is an antibiotic prescribed mainly for people who are allergic to penicillin. It is often used for respiratory tract infections and in the treatment of STDs, syphilis, acne, and other bacterial infections.

How can you avoid contact with this allergen?

Avoid products that list any of the following names in the ingredients:

- (3R*,4S*,5S*,6R*,7R*,9R*,11R*,12 R*,13S*,14R*)-4-((2,6-Dideoxy-3-Cmethyl-3-O-methyl-alpha-L-ribohexopyranosyl)oxy)-14-ethyl- 7,12,13- trihydroxy-3,5,7,9,11,13- hexamethyl-6-((3,4,6-trideoxy-3-(dimethylamino)-beta-D-xylohexopyranosyl)oxy)oxacyclotetradecane-

What are some products that may contain this allergen?

Medications

- Acne control
- Bacterial infections
- Breathing difficulties
- Chlamydia
- Gonorrhoea
- Syphilis

For additional information about products that might contain this allergen, visit the Consumer Product Information Database (householdproducts.nlm.nih.gov) online at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
