

the art and science of smart patch testing™

NA91: Carmine ±
CAS# 1390-65-4

Patient Information

Your patch test result indicates that you have a contact allergy to carmine ±. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is carmine ± found?

Carmine ± is a pigment of bright red color used in cosmetics, paints and artificial flowers, and added to food products to dye them.

How can you avoid contact with carmine ±?

Avoid products that list any of the following names in the ingredients:

- | | |
|-------------------------------|--------------------------|
| ■ B Rose liquid | ■ Cochineal extract lake |
| ■ CCRIS 1204 | ■ EINECS 215-724-4 |
