

the art and science of smart patch testing™

MC264: Ferrous chloride

Patient Information

Your patch test results indicate that you have a contact allergy to ferrous chloride. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is ferrous chloride found?

Ferrous chloride is found in veterinary products, sewage treatments, drinking water production products, and in various industrial household products.

How can you avoid contact with ferrous chloride?

Avoid products that list the following in the ingredients:

- AI3-51902
- CCRIS 2299
- Caswell No. 459
- Chlorure ferrique
- Chlorure ferrique [French]
- Chlorure perrique
- Chlorure perrique [French]
- EINECS 231-729-4
- EPA Pesticide Chemical Code
- 034901
- Ferric chloride
- Flores martis
- HSDB 449
- Iron chloride
- Iron chloride (FeCl₃)
- Iron perchloride
- Iron sesquichloride (DOT)
- Iron trichloride
- Iron(III) chloride
- Iron(III) chloride, solution
- NSC 135798
- NSC 51150
- Natural molysite
- Perchlorure de fer
- Perchlorure de fer [French]

What are some products that may contain ferrous chloride?

Etchants

Iron-intensive fertilizers

*For additional information about products that might contain **ferrous chloride**, go to the Household Product Database online (<http://householdproducts.nlm.nih.gov>) at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
